

VIHT - Automotive service equipment, 12V – 110V- 230V universal equipment for OEM services centers

ISO/IEC 17025 certification enhances the credibility of the CR brand and assures the quality of OEM services, resulting in increased sales and customer loyalty.

The VIHT is the Clear Choice for Interior Health Hazard Protection

Get ready your customers for the road to be traveled with Marvelzap`s Comfort Robot™ **Vehicle Interior Hygiene Treatment (VIHT)**. Whether for an everyday driver or a trucker, all can depend on a properly sanitized complete interior for safe driving. The CR Hygiene Technology is Not Your Average Interior Sanitizer. CR technology is only supplied to OEM services.

Take advantage of the easy 6-week CR trial and highlights pointers of the 12-point Game Changer Guide.

Techninal advantages:

- CR-DA Technology is: organic, dry, chemical and residue-free and fully automated process
- · Removing environmental and general life-related health hazards while driving has a significant impact on well-being
- · Helps for people with sensitivity toward allergies
- · Does not harm interior surfaces or electronic component
- · An accredited laboratory has verified that the CR system achieves a 99.9% satisfactory hygiene treatment result
- · Recommended frequency (by multiple international agencies) twice per year
- OSHA approval for indoor use

Comfort Robot (CR-DA) is unlike any product not available in stores or detail shops. The treatment requires a specially designed equipment and most likely your vehicle brand service department has it. CR -DA Technology does not contain inorganic chemicals or residues which could cause allergy reaction or cause changes in materials. The CR-DA is a Residue -Free process and laboratory verified for treatment efficacy. The treated interior and ventilation system surfaces will provide a pathogen free condition for the travelers.

- ✓ Developed and lab tested for 99.9% disinfection of surfaces and equipment interacting with motorists
- ✓ Cold Plasma technology is the most efficient O3 gas producer, microchannel design with microprocessor control
- ✓ 27-minute base automated hygiene treatment program with additional several customized program choices
- ✓ Electronic O3 gas neutralizer for worker`s OSHA safety, providing indoor usage
- ✓ Dry atomizer, LED energy sourced 100% natural comfort scent diffuser
- ✓ 12V-110V-230V in bay or mobile operation
- ✓ Installation and removal time only 2 minutes

Customer's Personal Health is very important - take advantage of the business and personalization opportunities!

Proof of treatment label

100% organic process without chemical residues - Non allergen

Important: The Comfort Robot is capable of operating with universal 12V-110V-230V power sources. **Total O3 gas destruction capability meets OSHA workers safety rules and allows the CR tool to be operated in the service bays while performing other tasks. This prevents the spread of health-hazard oxidants in workplace air.** Performing dry scent diffusion (DA) is an essential part of every treatment cycle. Working teams and car owners can enjoy the pleasant and clean smell of the interior without having to air it out after treatment.

The O3 gas output of the CR series was confirmed with the use of instruments approved by the ISO/IEC 17025 Ozone Monitor, Calibration and Certification standard.

Safety: Marvelzap Technology is a leader in hygiene and automation technologies that complies with OSHA and EU-OSHA worker safety regulations. We perform traditional in-depth technical studies, follow-up results and use real-world evidence (RWE). Verification of the hygiene treatment results was done by an accredited laboratory. The CR treatment procedure does not pose any health or financial risks.
