Reliable health protection for motorists on the road - today and tomorrow

In our changing times, the vehicle itself can be a carrier of dangerous health pathogens. The role of the automobile is becoming more important for families and companies in our society.

Technological advancements have helped vehicle ventilation systems to become more efficient as new technology eras are evolving. The changing environment presents new challenges to our health, which prompts us to search for new solutions as we are often confronted with financial uncertainties.

Future driven decontamination of air and surfaces

Comfort Robot is packed with functions that enable you to plan and perform the hygiene service more quickly, from the moment that the car enters the service; to perform all necessary service work and have the CR treatment carried out by the time the customer leaves your service. This is made possible by ISO/IEC 17025 standards and functions like OSHA indoor compliance, Cold Plasma Technology, Dry scent diffuser, 12V-110-230V multi use, to mention a few. Our comprehensive research and engineering of vehicles has an ideal width and depth. The mechanic can effortlessly put the CR unit in working mode in any models.

Certified 99% efficacy in disinfecting and odor removal of interior surfaces

Comprehensive service solution for all vehicles

The ecosystems are causing a variety of new health hazards. Consumers and motorists are requesting more than just a vehicle that works. They are looking for a full and trustworthy service.

The goal of Marvelzap`s Comfort Robot is to provide travel experiences in safe and hygiene-treated vehicle interiors on the roads, while also aiming to implant experiences in motorists.

Benefits for the service department

- **Get the job done in 27 minutes**
- Quickly, accurately and confidently
